

NAMING DEFINITIONS FOR BILLABLE ORACLE DATA FILES

Effective: June 1, 2000
Revised: March 1, 2007
Owner: Sandy Sheppick

PURPOSE

To define the policy and procedure for naming billable Oracle data files using direct access storage devices at any of the State of Utah computer facilities and to allow for billing of said storage.

SCOPE

This policy applies to all billable Oracle data files on ITS mainframe computers.

BACKGROUND

In an effort to identify Oracle billable data files from other Oracle data files, naming conventions are required.

POLICY

The Division of Information Technology Services (ITS) shall maintain standard data set names to isolate Oracle billable data files.

PROCEDURE

The following standards are used to identify billable Oracle data set names. These standards may be influenced by the number of Oracle application servers installed and the physical configuration of the CPUs.

First Node

Two character department code. Identifying ITDATABASE as the data set owner.
(Example: DB)

Second Node

Four character Oracle application server SID followed by a \$.
(Example: ORRG\$)

Third Node

Two character department code (alpha) and a three digit billing code (numeric). (The billing code will be given to the billing group along with a corresponding DASID)
(Example: FI001)

Remaining Nodes

Left to the discretion of the database group.
